

1. Check Customer Eligibility API

Check Customer Issuance Eligibility

This API will be used to check customer type to redirect the customer to designated flow. Will be called when a user clicks on NCMC Banner outside the Bank section

Endpoint

GET /card-management/customer/eligibility

Request Headers

Parameter	Mandatory	Description	Validations/Sample Values
X-Request-ID	M	Unique id to be generated for each request to facilitate tracking. We suggest using V4 UUIDs, or another random string with enough entropy to avoid collisions.	Alphanumeric Min. length = 10 Max length = 50 eg: a64b7a35-260b-4aa7-bb29-6b04290ac050
X-Access-Channel	M	Access Channel at partner's end through which an agent accesses the services	String
Authorization	M	Encrypted Device Id for Thanks App JWT For Internet Banking	

Response Headers

Parameter	Mandatory	Description
X-Request-ID	M	Unique id generated by the client for each request to facilitate tracking. Same as X-Request-ID in request header

Response Object -

```
1  ----- for NTB customer -----
2
3  {
```

```

4     "meta": {
